(54) Title: USE OF A SINGLE-CELL PROTEIN MATERIAL

(57) Abstract: The present invention relates to the use of a single-cell protein material (SCP). The SCP material lowers the concentration of cholesterol in plasma, and triglycerides in the liver. SCP also induces a favourable change in the fatty acid pattern, and lowers the concentration of homocysteine in plasma. A preferable embodiment of the invention relates to the use of SCP as an anti-atherogenic and cardio protective agent, either given as a pharmaceutical or as nutritional composition, e.g. as a functional food.
